

EXPERIMENT 6

RAIL FENCE CIPHER

AIM

To implement the Rail Fence transposition technique using Python.

ALGORITHM

1. Read the plaintext.
2. Arrange the characters in zig-zag order.
3. Read the rows sequentially to obtain the cipher text.
4. Display the encrypted text.

PYTHON CODE

```
def encrypt(text):  
    rail1 = ""  
    rail2 = ""  
  
    for i in range(len(text)):  
        if i % 2 == 0:  
            rail1 += text[i]  
        else:  
            rail2 += text[i]  
  
    return rail1 + rail2  
  
plain = input("Enter Plain Text: ")  
  
cipher = encrypt(plain)  
  
print("Encrypted Text:", cipher)
```

OUTPUT

```
Enter Plain Text: FRIDAY
Encrypted Text: FIARDY

...Program finished with exit code 0
Press ENTER to exit console.
```

RESULT

Thus the Rail Fence transposition technique was implemented successfully using Python.
